Il pistone **PDEP**, è un pistone a doppio effetto, per movimenti rettilinei alternativi, indicato per cilindri pneumatici. E' realizzato in **NBR 70 Shore**. Il profilo a labbri di tenuta arrotondati, ne facilita lo scorrimento, evitando il fenomeno di Stick-Slip. La scanalatura porta lubrificante compresa tra i due labbri di tenuta, garantisce la linearità al momento assiale nel tempo. I distanziali in senso dello scorrimento, auto-allineano il pistone alla camicia, nel caso ci fossero carichi radiali molto forti. La **PDEP** presenta nella parte interna dei bassorilievi che facilitano il primo distacco durante l'inversione di marcia.
