Le **guarnizioni GIR-GER** realizzate per offrire ai clienti nuove soluzioni tecnologiche, consentono una maggiore economia sia per quanto riguarda il costo della guarnizione che dal punto di vista delle lavorazioni, essendo queste guarnizioni montate in cava chiusa. Sono particolarmente indicate per cilindri oleodinamici, sia a semplice che a doppio effetto, per presse, pompe ed in particolare per macchine movimento terra quando il consumo delle guarnizioni è notevole poiché tutti i tipi normalmente in commercio si usurano molto frequentemente, ed in quei casi in cui lo spazio è ridottissimo ed i costi contenuti. Si suddividono in due tipi: serie **GER** (per **tenuta su piston**) e serie **GIR** (per **tenuta su steli**). Sono composte da due pezzi: un anello in materiale **PTFE caricato** che offre ottima tenuta, bassissimo coefficiente di attrito, elevata resistenza all'usura ed eccellente resistenza alla corrosione e da un anello **TECNORING in gomma sintetica** speciale che

funge da spintore dell'anello di tenuta.

CARATTERISTICHE GENERALI

Facilità di montaggio

Elevata resistenza all'abrasione

Elevata resistenza all'estrusione

Basso valore di deformazione
