L'elemento guida **TEF SEAL**, viene fabbricato in **PTFE** con la possibilità di essere prodotto con differenti cariche (bronzo, bisolfuro di molibdeno) sulla base delle diverse condizioni e applicazioni di lavoro. Essendo fornibile in lunghezze di circa 20 mt., ben si presta alle applicazioni speciali. Per le misure standard vi rimandiamo alla pagina seguente. L'elevata resistenza all'usura e il basso coefficiente di attrito, che garantiscono un buon funzionamento senza lubrificazione, un'ottima resistenza alle sostanze chimiche e alle alte temperature, sono alcuni tra i tanti vantaggi degli anelli TEF SEAL.
